

WATERTRONICS®

MOVING WATER FORWARD

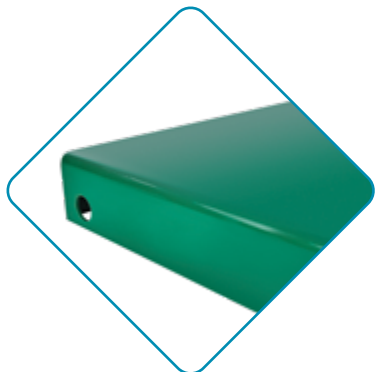

For four decades, Watertronics® has built a winning reputation by developing innovative products with value added differentiators. With our talented and dedicated team of industry experts, we continue to lead the markets we serve and advance the boundaries of efficient water management technology. We offer a full line of pumping solutions for golf, commercial landscape, agriculture and municipal markets from simple, self-enclosed systems to multi-pump, large-capacity systems for water districts, resorts, and farming operations. ***Our passion is pump technology; its all we do.***

- ◆ Over 200 Employees
- ◆ Domestic and International Sales, Service and Manufacturing
- ◆ 18 Regional Sales Managers
- ◆ 30 Application and Design Engineers
- ◆ 15 Factory-based Pump Service Network® Technicians
- ◆ 250+ Certified Field Pump Service Network Technicians
- ◆ 220,000 sq ft of Manufacturing Facilities Space
- ◆ In-house UL 508 Panel Shop
- ◆ In-house Pump Shop

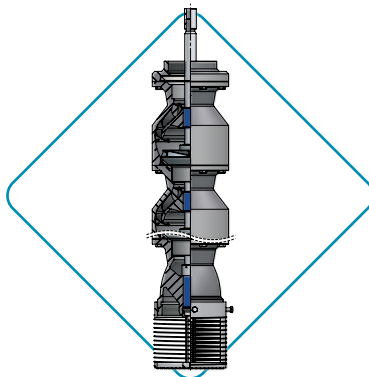

WHY CHOOSE WATERTRONICS?

SKID CONSTRUCTION

Reinforced 3/8 in. (10mm) formed steel base construction, with rounded seamless edges to resist rust and corrosion. Flat skid surface provides ease of maintenance and reduces water and debris collection.

VERTICAL TURBINE PUMP

Industry-leading vertical turbine pumps feature ductile iron discharge heads and bowls, along with 304 stainless steel, dynamically balanced impellers. This combination ensures excellent corrosion resistance, optimal performance efficiency, and extended service life.

ELECTRONIC BUTTERFLY VALVE

Electronic Butterfly Valve (EBV) complements VFD controls by pressure regulating each across-the-line pump, eliminating surges, check valve slam, air entrainment and providing 100% backup pressure regulation in the event of a VFD fault.

MECHANICAL SEAL

Maintenance-free mechanical seal assembly eliminates packing adjustments and features permanently lubricated, sealed bearings for precise shaft alignment. Keeps the pump house floor free of water spray, while the innovative seal and discharge head design allows quick seal installation and removal without removing the motor.

DYNAMIC TESTING

Offering the industry's most comprehensive pre-ship dynamic test process to ensure a quick installation and trouble-free start-up. This process fine-tunes each system to reduce set-up time and guarantees your pump station will perform exactly as promised.

WATERVISION REMOTE TELEMETRY

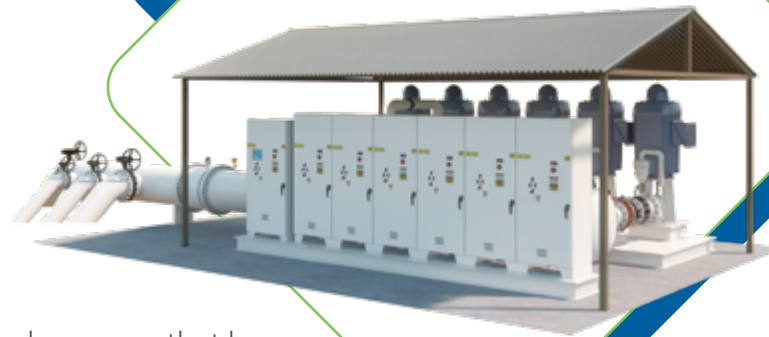

Stay connected and in control of your pump station with WaterVision®. This next generation advanced cloud telemetry gives users the same control they have from the station to monitor and make full system adjustments like set points, safety resets, and alarm resets from any mobile device.

AGRICULTURAL PUMPING SYSTEMS

Watertronics offers turnkey agricultural systems that provide reliable water delivery from source to sprinkler. Whether you have a large corporate operation or a small family farm, Watertronics can design and build pumping systems that save you water, power and time. By improving efficiency and reliability, you can expect lower utility bills and reduced downtime.

Since 2018, Watertronics has been an independently owned company that has successfully partnered with all brands of center pivot irrigation manufactures.

Our fully integrated pumping systems and advanced control technology can be used with virtually any kind of irrigation system, including center pivot and lateral move, drip irrigation, wheel roll and hose reel, flood irrigation, and process/wastewater.

GOLF PUMPING SYSTEMS

Since 1986, Watertronics has led the industry with cutting-edge technology that provides superior golf irrigation results. Working closely with golf course owners, superintendents and designers, Watertronics pumping systems deliver the ultimate in efficiency, reliability and provide the lowest life cycle cost in the industry. Proprietary features such as mechanical seals, EBVs, WaterVision® cloud-based monitoring, revolutionary high spec vertical turbine pumps, and our thorough dynamic certified factory testing before shipment are among the list of what sets Watertronics apart from the competition.

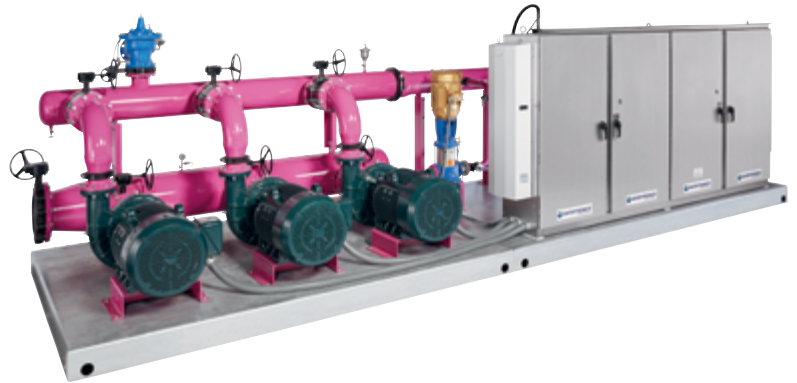

LANDSCAPE PUMPING SYSTEMS

Watertronics has been serving the landscape irrigation market for over four decades. We pioneered the concept of a self-enclosed pumping system through our introduction of the WaterMax® Series in 1980, which has since been widely duplicated in the landscape market. We offer a variety of products customized to fit numerous landscape applications including parks & recreation, cemeteries, schools, universities, strip malls, sports complexes, subdivisions, nurseries, and business parks to name a few.

MUNICIPAL/INDUSTRIAL/ COMMERCIAL PUMPING SYSTEMS

The municipal pump system market has always been a challenge. Exacting specifications and thorough documentation is a must, along with robust designs sometimes using unfamiliar materials. This is where the culture of custom found here at Watertronics serves this market perfectly. From small high-rise single pump boosters to large multi-skid, multi-pump enclosed systems, Watertronics has the engineering and production experience to deliver per specification and on time.

RAINWATER HARVESTING

A water harvesting system gathers rainwater or stormwater from one or more building locations such as rooftops, parking lots, and air conditioning units to store, filter and distribute water for your specific non-potable use. The SkyHarvester® product line from Watertronics provides a single-source solution for commercial water harvesting systems for new or existing building sites.

Our sales and engineering group works hand in hand with your Architect or Engineer to provide custom solutions with everything you need to harvest, store, filter and control the distribution of your own water supply.

WATER DISTRICTS

Watertronics is uniquely qualified to partner with water districts as they strive to provide clean and reliable water to their customers with the least amount of operating cost possible. Our experience with very large agricultural projects, municipal infrastructure projects and custom turf irrigation projects provides us with 40 years of experience in custom, large pumping solution designs. Our comprehensive capabilities to support the project's initial scope, system design, construction and implementation means we are truly a one stop shop for this highly specialized market.

SERVICE & WARRANTY

Watertronics sets the standard for after-sale service for all brands of pumping systems. Our Pump Service Network (PSN) is the largest service team in the industry supporting pump stations.

- ◆ Internal PSN technical representatives available 24/7
- ◆ Factory-based control lab with remote access capability to any Watertronics station for troubleshooting
- ◆ 250+ certified independent field technicians worldwide
- ◆ Technical service for installation, start-up and user training
- ◆ Preventative maintenance programs and service repairs
- ◆ After market part sales and retrofits for any brand of pump station

PSN certified field technicians specialize in servicing all aspects of pumps stations including pumps, motors, controls, valves, filtration, chemical injection, and telemetry. Beyond Watertronics pump stations, PSN service partners provide service and parts sales to any customer, regardless of their pump station's age, configuration or brand.

These field technicians are backed by a dedicated department of factory support technicians at our headquarters to provide first-tier technical support 24/7 via phone and remote station login.

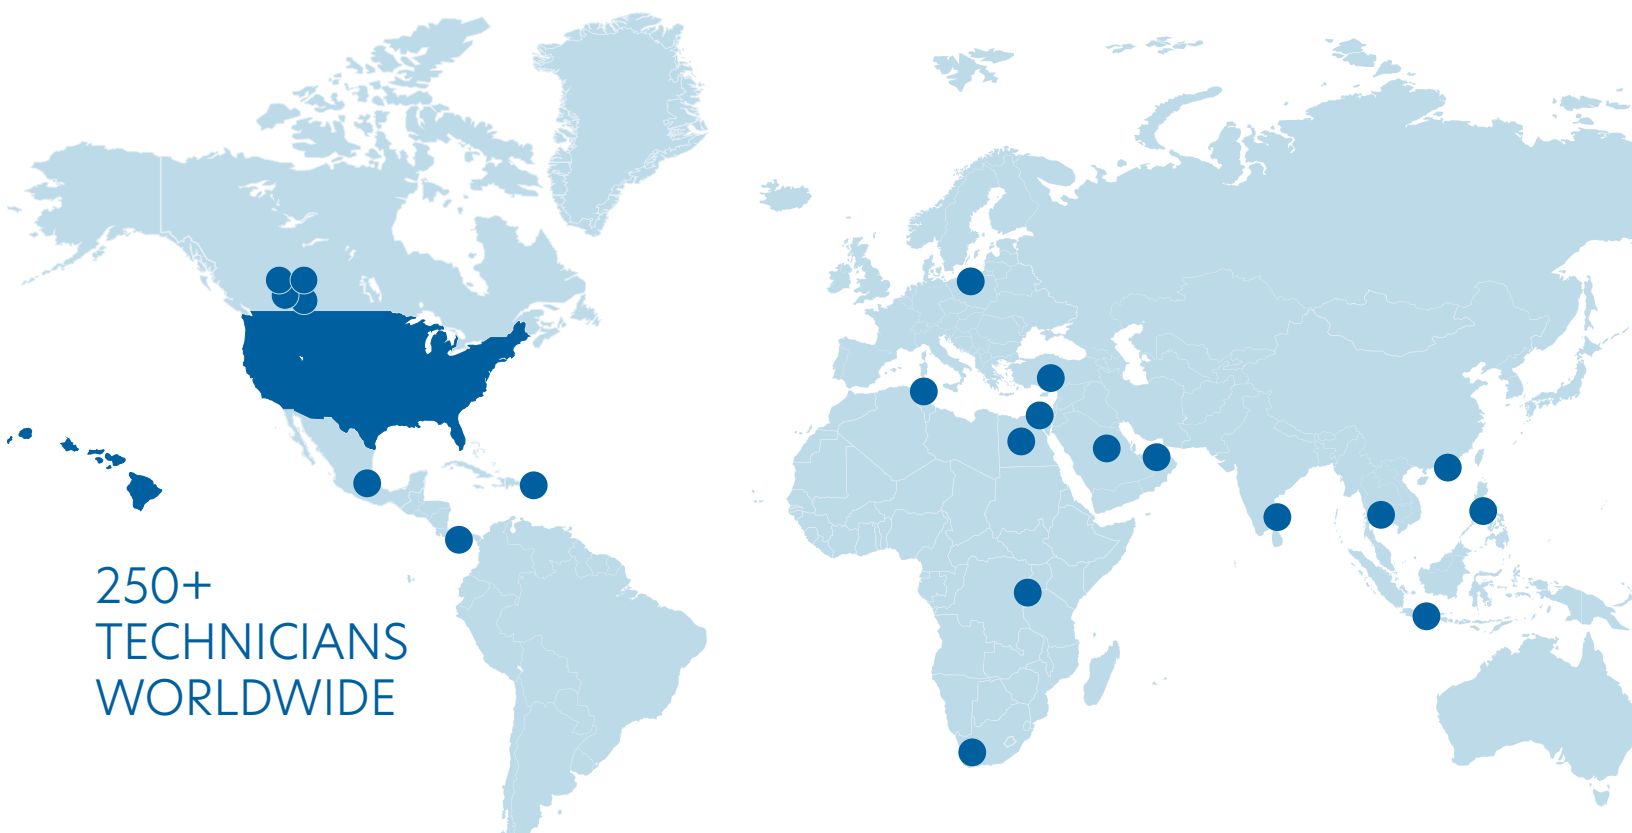

All Watertronics pump stations come with a 2 year bumper-to-bumper warranty including parts, labor, and crane and are backed by our Pump Service Network team.

TRAINING & FACTORY TOURS

At Watertronics, we recognize the need for factory-trained and certified technicians supporting our products in the field as well as educating channel partners and end-users on system operations. We are committed to providing the highest level of education to the industry.

Annually, we hold a Pump Service Network service school to welcome new providers to our network and recertify existing technicians on new products and systems.

Ongoing, we welcome visitors to our factory to witness our commitment to building the highest quality pump stations in the industry, receive education on the pivotal role pump stations play in projects, as well as conduct user training on operating a Watertronics system.
